

I fully support the ARRL's petition RM-10867 and urge the FCC to incorporate it in its rulemaking.

In today's world of instant communications via telephone and internet and in concert with other countries adoption of no-code it not only makes sense it is imperative to update the present structure to keep the US in step with world communications. This restructuring is long overdue and will help grow amateur radio domestically. Through this growth many citizens will be able establish individual communications with persons in other countries further promoting the US. Additionally it provides for better homeland security, fosters improved individual communications and brings amateur radio up to the technology of our era. Thank you. Mark Westermeier K9ALQ
